

Changelog

v0.4.0

Breaking Changes

- **report.typ rename:** The template entrypoint was renamed from `main.typ` to `report.typ`.
- **Multiple outlines:** The `outlines` parameter now accepts a dictionary instead of a list.
- **Figure and table style:** New `figure-style` and `table-style` parameters control caption style; it is no longer hardcoded.
- **Figure spacing:** New `figure-spacing` parameter controls vertical spacing around figures and tables (default `0.75em`). Previously there was no spacing.
- **Bibliography accent color:** The bibliography now uses the document accent color.
- **Degree customization:** `degree` now accepts a dictionary for more control (e.g. separate label and name).
- **Removed German support:** `"de"` is no longer a valid language value.

New Features

- Generative AI usage declaration via the `genai-declaration` parameter.
- Equation numbering support.
- Abbreviations list is now sorted alphabetically.
- Cross-references to chapters now use the "Chapter" supplement.
- Document metadata can be configured via the `metadata` parameter.
- Floating figures and tables are prevented from spilling into the next section.
- Indented lists are supported in the template body.
- Graph examples now use `lilaq`.

Bug Fixes

- The `date` parameter is now used instead of the automatic compilation date.
- First paragraphs in frontmatter sections no longer have a leading indent.
- The abbreviations list no longer appears in the table of contents.
- A missing page break before the abbreviations list was added.
- Appendix cross-reference supplements are now correct.
- IEEE-style figures now render correctly.
- Spanish month names are now lowercase, per RAE.
- Spacing around figures with `placement: auto` is now correct.
- Headers and footers on the last pages of body and endmatter sections are correct.
- Appendix numbering is correct.
- `genai-declaration` validation errors are more informative; raw content is also accepted.
- `tutor` was renamed to `advisor` consistently throughout.
- English author label order on the title page is correct.
- Argument types can now be specified as an array of accepted types.
